# **PURPOSE-BUILT EMAIL ARCHIVING**

designed to resolve business challenges

### Ready for your network, public and private clouds, or as a managed service

Email is flexible and convenient—often serving as an organization's primary written communication channel. As such, more than half of an organization's' confidential information is stored in email form, which, when paired with stringent email retention policies, creates momentous challenges for IT departments.

Not only must admins protect valuable email records, they must also address storage costs and deliver against legal, regulatory, and corporate governance requirements.

Arcserve resolves these business challenges, giving IT teams the ability to manage their entire data protection and email archiving strategies through a single, elegantly simple user console.

#### Robust email archiving ensures complete protection and reduces risk of exposure

Arcserve<sup>®</sup> UDP Archiving is a purpose-built email archiving solution designed to protect corporate email records and make them easily accessible for regulatory compliance, legal discovery, and corporate governance with seamless access for employees.

Easily meet global compliance and legal requirements with robust capabilities not found in Office 365, at a lower cost.

### **BENEFITS DELIVERED**

### Comply with legal and corporate regulations, such as GDPR and HIPPA

Meet worldwide compliance regulations, including: GDPR, Freedom of Information ACT, SEC/FINRA, EU Directive, HIPAA, SOX, and many more. Be confident and ready to respond quickly to requests by preserving email records with the ability to quickly and easily search, manage and produce evidence. Unique features enable you to designate a Data Protection Officer (DPO) role, locate records, and administer a "right to be forgotten" request. Multiple levels of access can be set to perform advanced searches and manage records, while restricting employee access to individual emails

#### **Eliminate search complexity**

Quickly search through emails and produce records for legal, regulatory, and corporate governance. Search based on senders, receivers, text, phrases, tags, folders, notes, with basic or advanced features such as Boolean connectors, Fuzzy or proximity parameters. Save your searches, tag and group messages, add notes and manage with a full legal process.

### Efficiently manage email records

Decentralized organizations easily manage multiple divisions or locations, and MSPs effortlessly support multiple end-users with single or multi-tenant architecture. Store archived email on-premises or in a private or public cloud, entirely independent of the primary mail system, and collect new emails in real-time with the ability to archive all historical messages from your mail server or prior archive system. Automatically apply policies such as message retention, exceptions, or legal holds based on employees, domains, or content.

#### **Reduce storage costs**

The average employee never looks at an email older than a year, yet organizations keep many years of emails on a mail server. Quickly move old emails to your long-term archiving and give employees access to every message they have sent or received through Outlook or web access.

## arcserve

### READY FOR YOUR NETWORK or as a managed service

#### **Virtual Software**

- Ready for your network or any public or private cloud, such as Azure or AWS
- Choose from a VMware OVF, Microsoft HyperV, or Amazon(AWS) AMI format
- Purchase based on archived mailboxes, from 50 – 10,000
- True scalability and high performance

#### **Managed Cloud Service**

- Options range from 100GB 50TB ofavailable storage
  - → Ideal to move your mail server to the cloud

ßß

We spent days trying to restore and locate emails for an investigation; days that amounted to wasted cost and resources. Arcserve UDP Archiving is not only extremely easy to use – truly plug-and-play – but it's a solution I wish I would've had years ago.

Michael Gruber, Senior Systems Administrator, UNICEF Canada
